SUMMARY

Data Analyst with a postgraduate qualification in Data Science & Analytics from Maynooth University and hands-on experience in SQL, Python, and statistical modelling for data-driven decision-making. Skilled in data cleaning, exploratory data analysis (EDA), and predictive modelling to turn raw data into actionable business insights, with strong dashboard reporting and visualisation capability using Power BI and Excel, and a solid foundation in database management and data pipelines.

EXPERIENCE

React Developer Intern, C-ACE Governance Solutions Pvt. Ltd. 01/2025 - 07/2025 | Pune, India

- Reduced manual content-update effort by ~40% by designing reusable RESTful API integrations and front-end components using React.js, Node.js, Express.js, and MySQL, improving data consistency across systems.
- Automated customer interactions and real-time, location-based service delivery by integrating a Dialogflow chatbot with the Google Maps API, in Git-based, cross-functional workflows.

Software Development Intern, iConcile Technologies Pvt. Ltd. 05/2024 - 06/2024 | Pune, India

- Cut UI rendering time by ~30% by optimising component and state-management logic in a production React front end.
- Automated structured workflow visualisations by implementing the Dagre graph layout algorithm within React Flow, eliminating manual diagram layout work.

EDUCATION

MSc Data Science & Analytics, Maynooth University 2025 - Present | Ireland

MSc Computer Science, Savitribai Phule Pune University 2023 - 2025 | India

CGPA: 9.48 / 10

BSc Computer Science, Savitribai Phule Pune University 2020 - 2023 | India

CGPA: 9.45 / 10

SKILLS

Programming: Python, SQL (PostgreSQL, MySQL), R, JavaScript
Data Analysis & BI: Pandas, NumPy, Power BI, Excel, Matplotlib, Seaborn, ggplot2 (R)
Statistical Modelling: Scikit-learn, Feature Engineering, Model Evaluation, Hyperparameter Tuning
Tools: Git, GitHub, Docker, QGIS

CERTIFICATIONS

- Google Data Analytics Professional Certificate (Google)
- IBM Machine Learning Professional Certificate (Coursera)

PROJECTS

Single-Lead ECG for Structural Heart Disease Detection | *Python, PyTorch, PyTorch Lightning*

- Reached 71% AUROC from single-lead ECG input alone (vs. 80% for 12-lead ECG) by training a ResNet1D architecture with zero-masking and lead-ablation experiments across 12 cardiac conditions.
- Delivered a clinically-rigorous feasibility assessment for wearable ECG devices by building an evaluation pipeline with dynamic threshold optimisation across AUROC, AUPRC, sensitivity, specificity, PPV, and NPV.

Cybercrime Data Analysis & Spatial Clustering - India | *R, ggplot2, dplyr, sf, K-Means Clustering*

- Surfaced concentration patterns across 15 cybercrime categories and the top 5 Indian cities through exploratory data analysis, correlation heatmaps, treemaps, and Herfindahl-Hirschman Index (HHI) visualisations in R (dplyr, tidyr, ggplot2).
- Segmented Indian states into 3 crime-intensity clusters via spatial K-means clustering on geospatial coordinates (sf, rnaturalearth), validated with silhouette scoring, WSS/BSS ratios, and ANOVA.

Diabetes Prediction using Machine Learning | *Python, Scikit-learn, Pandas*

- Achieved 75% classification accuracy on the Pima Indians Diabetes dataset by benchmarking Gini vs. Entropy split criteria and tuning hyperparameters across 9 Decision Tree configurations.
- Confirmed model reliability for clinical-style decision support by evaluating precision and recall alongside accuracy, using confusion-matrix analysis to diagnose class-level errors.
